Professional summary

Software Developer specializing in healthcare technology, with expertise in building and maintaining full-stack web applications and securely transmitting data via RESTful web services. Experienced in integrating complex systems, developing APIs, and implementing scalable solutions that enhance interoperability and optimize user workflows.

Employment history

Software Engineer Intern, Jun 2026 - Aug 2026

Harmony Healthcare IT, South Bend, IN

- Internship focused on building and delivering production-level healthcare software, collaborating with engineers in an Agile environment to develop features, write tests, and contribute to code reviews across the full software development lifecycle

Data Integration Engineer, Aug 2022 - Jul 2025

Epic Systems, Madison, WI

- Led end-to-end integration projects migrating healthcare systems to Epic EMR, coordinating cross-functional teams and delivering production-ready interfaces on time
- Designed and developed full-stack web applications using C#, JavaScript, HTML/CSS, and MVC architecture to improve internal tooling and usability
- Built and enhanced APIs in C# and MUMPS for HL7 interface auditing and billing, improving data accuracy and reliability
- Troubleshoot integration issues across 10+ healthcare organizations, optimizing HL7 interfaces and web API performance
- Used Git for version control in Agile environments, supporting efficient code reviews and deployment workflows

Personal Projects

Foodbridge

- Won 1st Place at the George Hacks x United Nations “Reboot the Earth” Hackathon by building FoodBridge, an AI-powered meal planning app for underserved communities
- Developed AI-driven meal planning using 770K+ USDA food data, optimizing for nutrition, dietary needs, and cultural preferences
- Created grocery lists with real-time pricing to support budget-conscious and SNAP/WIC users

ClipME, Version 1.0

- I developed a **full-stack web application** that enables users to create and share website reviews within the ClipME community. Users can rate posts, discover valuable websites and tools, and follow other users to curate a personalized feed of recommendations.

Education

Master of Science, Computer Science, Aug 2025

American University, Washington, DC

- 4.00 GPA, Summa Cum Laude
- Relevant Courses: Database Systems, Software Engineering, Artificial Intelligence, Operating Systems, Information Visualization, and Design Organization for Programming Languages.

Bachelor of Arts, Mathematics

University of Richmond, Richmond, VA

- 3.42 GPA, Cum Laude
- Relevant Courses: Introduction to Data Science, Statistical Learning, Computing with Java, Data Structures, Probability, Set Theory, Financial Mathematics, Business Statistics, Software Systems Development, Algorithms & Real Analysis.

Skills

Languages

Java (Skillful),
C# (Experienced),
Python (Skillful),
JavaScript (Skillful),
TypeScript (Beginner),
Kotlin (Beginner),
MUMPS (Skillful)

Frontend

React (Experienced),
HTML (Experienced),
CSS (Experienced)

Backend & APIs

RESTful Web Services (Experienced),
API Development (Experienced),
Microservices (Beginner),
Unit Testing (Skillful)

Databases

PostgreSQL (Skillful),
Data Integration (Experienced),
HL7 (Skillful)

Tools and Technologies

Git (Skillful),
AWS (Beginner),
Claude (Skillful),
Docker (Beginner)

Software Engineering Practices

Agile Development (Experienced),
Project Management (Experienced),
Quality Assurance (Skillful),
CI/CD (Beginner)
